

xTAG BEACONS for Restaurants

Simple Smartphone Tap Access to Menus and More

Give your patrons simple, Covid-safe access to menus and more on their Smartphones. Android and iPhone users simply "Tap" xTAG BEACON devices at their table and menu details are loaded onto their phone screen from your website. Tap again to view additional content such as a wine list, beer list, nutrition info, restaurant history... any info that helps you engage patrons and keep them coming back.

Mount an xTAG BEACON at your entrance and give patrons one-Tap auto-dial to your host to arrange for seating.

xTAG BEACONS use Smartphone NFC Tap support to deliver content. No Smartphone app install is required.

NFC is a much simpler, reliable and powerful technology compared to QR codes. Clients won't become frustrated trying to scan a code that may be dirty or damaged beyond use and they can Tap multiple times to receive additional content.

When purchased, we will preset xTAG BEACONS to deliver the content that you specify. To change the content that is linked to Taps, use the xTAG Explorer app. This app connects to xTAG BEACONS from up to 100 meters away using Bluetooth and includes straightforward, easy-to-use screens giving operators the ability to change Tap-initiated content in a secured way. Or, contact Deviceworx for replacement devices, with updated Tap-linked content, and we will rush replacements to you for a nominal fee. Replace existing devices and you are all set.

Call Deviceworx for details on how this innovative new product can help improve both your patron's experience and your revenue.
